## Thought of the day

The S&P 500 rose 0.5% on Wednesday, recovering from a recent bout of negative sentiment thanks to a favorable antitrust ruling for megacap tech and further dovish comments from the Federal Reserve. Signs of a cooling labor market, with a fall in job openings, added to confidence that the Fed will cut rates later this month. The central bank's latest Beige Book, which tracks regional conditions, reported that seven of the 12 Fed districts reported that "firms were hesitant to hire workers because of weaker demand or uncertainty." St. Louis Fed President Alberto Musalem said that he expected the labor market "to gradually cool and remain near full employment with risks tilted to the downside."

After Wednesday's rebound, the S&P 500 is again up close to 10% so far this year. A 1.9% advance in August marked the fourth consecutive month of gains—capping a robust summer for US stocks.

That said, the rally has also pushed already elevated valuations even higher. The S&P 500 now trades at around 22 times 12-month forward earnings, a top 5% reading since 1985. This has caused some anxiety about whether stocks have become too expensive.

But we don't see valuations as a reason to exit the equity market, and our outlook remains positive.

**Historically, valuations have not had a strong relationship with returns over the following 12 months.** To underscore our point that valuations are only one piece of the puzzle, we looked at the calendar year performance when the S&P 500 forward P/E at the start of the year was above 21 times. Including this year, start-of-the-year valuations have

## What to watch 5 September:

- US August jobs report
- Federal Reserve's Goolsbee speaks
- France July trade balance
- Italian retail sales

This report has been prepared by UBS Financial Services Inc. (UBS FS), UBS Switzerland AG, UBS AG Singapore Branch, UBS AG Hong Kong Branch. **Please see important disclaimers and disclosures at the end of the document.** 

only been this high five times since 1950. Returns in these years have been varied.

Strong earnings momentum and easing Fed policy have tended to help stocks advance despite more demanding valuations, based on our analysis. While the P/E ratio started both 1999 and 2021 above 21 times, stocks performed well in both these years owing to strong earnings growth and a supportive Fed. In contrast, stocks struggled in 2000 and 2022 as earnings momentum stagnated, and the Fed raised interest rates to slow down the economy.

This analysis bodes well for the current outlook, given the solid economic earnings backdrop, along with the expectation of Fed rate cuts resuming later this month. On the economic front, consumer spending remains supported by minimal job losses. Fed rate cuts should boost cyclical areas, and corporate investment incentives in the One Big Beautiful Bill (OBBB) are also helpful. Big tech companies indicated that Al investment will continue into next year. Our forecast is for earnings growth of 8% for the S&P 500 this year and 7.5% in 2026.

So, high valuations are not a clear signal for next-12-month returns. Instead, the Fed and earnings are usually more important. Valuations can appear elevated for extended periods. Ultimately, a negative catalyst is needed to drive a material derating, which we don't believe is currently on the horizon. We believe there will be furthergains from today's levels over the next 6-12 months. Our year-end S&P 500 price target is 6,600 and our June 2026 target is 6,800. Any market pullbacks would likely present buying opportunities, in our view.

### **Caught our attention**

**US job openings decline in July.** According to the latest Job Openings and Labor Turnover Survey (JOLTS), job openings fell to 7.18 million in July, below consensus estimates and down from a revised 7.36 million in June, marking the lowest level since September 2024. The job openings rate slipped slightly, and the job-to-jobless ratio fell below 1.0 for the first time since April 2021. The quits rate, a key measure of worker confidence, held steady at 2%, while layoffs and discharges edged up above expectations. Meanwhile, the Federal Reserve's Beige Book reported mostly flat economic activity across the country, with elevated uncertainty weighing on spending and hiring decisions. Survey respondents said that trade policy remains a key concern, with some businesses increasingly passing on higher costs to consumers. Labor demand softened further, with flat employment and modest wage growth reported in most districts.

Our view: Both the July JOLTS data and the Fed's Beige Book reinforce the narrative of a softening labor market. While the unemployment rate remains low, recent data point to a slackening in labor demand, including declining job openings and rising layoffs. We believe risks of falling employment are likely to outweigh lingering inflation concerns in the Fed's decision-making at the 16-17 September FOMC meeting. Investors will focus on Friday's US employment report, the final major labor data before the meeting, as Chair Powell has emphasized that labor conditions could deteriorate quickly if layoffs mount. Against this backdrop, we expect the Fed to cut rates by 100 basis points, starting in September, as policymakers prioritize stabilizing the labor market. In this environment, we continue to favor high-quality fixed income.

### **Non-Traditional Assets**

Non-traditional asset classes are alternative investments that include hedge funds, private equity, real estate, and managed futures (collectively, alternative investments). Interests of alternative investment funds are sold only to qualified investors, and only by means of offering documents that include information about the risks, performance and expenses of alternative investment funds, and which clients are urged to read carefully before subscribing and retain. An investment in an alternative investment fund is speculative and involves significant risks. Specifically, these investments (1) are not mutual funds and are not subject to the same regulatory requirements as mutual funds; (2) may have performance that is volatile, and investors may lose all or a substantial amount of their investment; (3) may engage in leverage and other speculative investment practices that may increase the risk of investment loss; (4) are long-term, illiquid investments, there is generally no secondary market for the interests of a fund, and none is expected to develop; (5) interests of alternative investment funds typically will be illiquid and subject to restrictions on transfer; (6) may not be required to provide periodic pricing or valuation information to investors; (7) generally involve complex tax strategies and there may be delays in distributing tax information to investors; (8) are subject to high fees, including management fees and other fees and expenses, all of which will reduce profits.

Interests in alternative investment funds are not deposits or obligations of, or guaranteed or endorsed by, any bank or other insured depository institution, and are not federally insured by the Federal Deposit Insurance Corporation, the Federal Reserve Board, or any other governmental agency. Prospective investors should understand these risks and have the financial ability and willingness to accept them for an extended period of time before making an investment in an alternative investment fund and should consider an alternative investment fund as a supplement to an overall investment program.

In addition to the risks that apply to alternative investments generally, the following are additional risks related to an investment in these strategies:

- Hedge Fund Risk: There are risks specifically associated with investing in hedge funds, which may include risks associated with investing in short sales, options, small-cap stocks, "junk bonds," derivatives, distressed securities, non-U.S. securities and illiquid investments.
- Managed Futures: There are risks specifically associated with investing in managed futures programs. For example, not all managers focus on all strategies at all times, and managed futures strategies may have material directional elements.
- Real Estate: There are risks specifically associated with investing in real estate products and real estate investment trusts. They involve risks associated with debt, adverse changes in general economic or local market conditions, changes in governmental, tax, real estate and zoning laws or regulations, risks associated with capital calls and, for some real estate products, the risks associated with the ability to qualify for favorable treatment under the federal tax laws.
- Private Equity: There are risks specifically associated with investing in private equity. Capital calls can be made on short notice, and the failure to meet capital calls can result in significant adverse consequences including, but not limited to, a total loss of investment.
- Foreign Exchange/Currency Risk: Investors in securities of issuers located outside of the United States should be aware that even
  for securities denominated in U.S. dollars, changes in the exchange rate between the U.S. dollar and the issuer's "home" currency
  can have unexpected effects on the market value and liquidity of those securities. Those securities may also be affected by other
  risks (such as political, economic or regulatory changes) that may not be readily known to a U.S. investor.

### **Risk information**

UBS Chief Investment Office's ("CIO") investment views are prepared and published by the Global Wealth Management business of UBS Switzerland AG (regulated by FINMA in Switzerland) or its affiliates ("UBS"), part of UBS Group AG ("UBS Group"). UBS Group includes former Credit Suisse AG, its subsidiaries, branches and affiliates. Additional disclaimer relevant to Credit Suisse Wealth Management follows at the end of this section.

The investment views have been prepared in accordance with legal requirements designed to promote the **independence** of investment research.

## Generic investment research - Risk information:

This publication is **for your information only** and is not intended as an offer, or a solicitation of an offer, to buy or sell any investment or other specific product. The analysis contained herein does not constitute a personal recommendation or take into account the particular investment objectives, investment strategies, financial situation and needs of any specific recipient. It is based on numerous assumptions. Different assumptions could result in materially different results. Certain services and products are subject to legal restrictions and cannot be offered worldwide on an unrestricted basis and/or may not be eligible for sale to all investors. All information and opinions expressed in this document were obtained from sources believed to be reliable and in good faith, but no representation or warranty, express or implied, is made as to its accuracy or completeness (other than disclosures relating to UBS). All information and opinions as well as any forecasts, estimates and market prices indicated are current as of the date of this report, and are subject to change without notice. Opinions expressed herein may differ or be contrary to those expressed by other business areas or divisions of UBS as a result of using different assumptions and/or criteria. UBS may utilize artificial intelligence tools ("Al Tools") in the preparation of this document. Notwithstanding any such use of Al Tools, this document has undergone human review.

In no circumstances may this document or any of the information (including any forecast, value, index or other calculated amount ("Values")) be used for any of the following purposes (i) valuation or accounting purposes; (ii) to determine the amounts due or payable, the price or the value of any financial instrument or financial contract; or (iii) to measure the performance of any financial instrument including, without limitation, for the purpose of tracking the return or performance of any Value or of defining the asset allocation of portfolio or of computing performance fees. By receiving this document and the information you will be deemed to represent and warrant to UBS that you will not use this document or otherwise rely on any of the information for any of the above purposes. UBS and any of its directors or employees may be entitled at any time to hold long or short positions in investment instruments referred to herein, carry out transactions involving relevant investment instruments in the capacity of principal or agent, or provide any other services or have officers, who serve as directors, either to/for the issuer, the investment instrument itself or to/for any company commercially or financially affiliated to such issuers. At any time, investment decisions (including whether to buy, sell or hold securities) made by UBS and its employees may differ from or be contrary to the opinions expressed in UBS research publications. Some investments may not be readily realizable since the market in the securities is illiquid and therefore valuing the investment and identifying the risk to which you are exposed may be difficult to quantify. UBS relies on information barriers to control the flow of information contained in one or more areas within UBS, into other areas, units, divisions or affiliates of UBS. Futures and options trading is not suitable for every investor as there is a substantial risk of loss, and losses in excess of an initial investment may occur. Past performance of an investment is no guarantee for its future performance. Additional information will be made available upon request. Some investments may be subject to sudden and large falls in value and on realization you may receive back less than you invested or may be required to pay more. Changes in foreign exchange rates may have an adverse effect on the price, value or income of an investment. The analyst(s) responsible for the preparation of this report may interact with trading desk personnel, sales personnel and other constituencies for the purpose of gathering, synthesizing and interpreting market information.

Different areas, groups, and personnel within UBS Group may produce and distribute separate research products independently of each other. For example, research publications from CIO are produced by UBS Global Wealth Management. UBS Global Research is produced by UBS Investment Bank. Research methodologies and rating systems of each separate research organization may differ, for example, in terms of investment recommendations, investment horizon, model assumptions, and valuation methods. As a consequence, except for certain economic forecasts (for which UBS CIO and UBS Global Research may collaborate), investment recommendations, ratings, price targets, and valuations provided by each of the separate research organizations may be different, or inconsistent. You should refer to each relevant research product for the details as to their methodologies and rating system. Not all clients may have access to all products from every organization. Each research product is subject to the policies and procedures of the organization that produces it. The compensation of the analyst(s) who prepared this report is determined exclusively by research management and senior management (not including investment banking). Analyst compensation is not based on investment banking, sales and trading or principal trading revenues, however, compensation may relate to the revenues of UBS Group as a whole, of which investment banking, sales and trading and principal trading are a part.

Tax treatment depends on the individual circumstances and may be subject to change in the future. UBS does not provide legal or tax advice and makes no representations as to the tax treatment of assets or the investment returns thereon both in

general or with reference to specific client's circumstances and needs. We are of necessity unable to take into account the particular investment objectives, financial situation and needs of our individual clients and we would recommend that you take financial and/or tax advice as to the implications (including tax) of investing in any of the products mentioned herein. **Important Information About Sustainable Investing Strategies**: Sustainable investing strategies aim to consider and incorporate environmental, social and governance (ESG) factors into investment process and portfolio construction. Strategies across geographies approach ESG analysis and incorporate the findings in a variety of ways. Incorporating ESG factors or Sustainable Investing considerations may inhibit UBS's ability to participate in or to advise on certain investment opportunities that otherwise would be consistent with the Client's investment objectives. The returns on a portfolio incorporating ESG factors or Sustainable Investing considerations may be lower or higher than portfolios where ESG factors, exclusions, or other sustainability issues are not considered by UBS, and the investment opportunities available to such portfolios may differ.

**External Asset Managers / External Financial Consultants:** In case this research or publication is provided to an External Asset Manager or an External Financial Consultant, UBS expressly prohibits that it is redistributed by the External Asset Manager or the External Financial Consultant and is made available to their clients and/or third parties.
